

**Wide On-Street Parking**  
 On-street parking with designated loading zone for residents and park patrons

**Bulb Outs**  
 Bulb outs narrow the street by extending the sidewalk or curbline to the driving lane to reduce the effective street width. The restricted street width sends a visual cue to motorists encouraging slower driving speeds. Bulbouts also reduce turning speeds when placed at intersections, prevent motorists from parking in or too close to pedestrian crossing areas, define and protect on-street parking, and enhance sightlines at intersections.

**Lateral Shifts**  
 Shifting a travel lane has an effect on speeds, since it requires the driver to be more attentive and focused on the near and middle distances, as opposed to long distances.
